# GLIDEROL® SELF STORAGE SOLUTIONS

A joint venture between Gliderol® UK, Ltd  
and Janus International, a US Corporation

*Our Hallway Door and Partition systems are designed and manufactured with durability, quick installation and ease of maintenance in mind. Systems consist of 0.7mm thick non-structural door frames and headers to provide one of the strongest hallway systems in the industry.*

*superior product + recognized value*

## FEATURES

### ROLL-UP FRAMES

Essential to the structure of the self supporting system, the roll-up frame is designed to maximize strength and integrity while minimizing space. The 50 mm return offers a stronger frame suited for roll-up door or Z-frame swing door installations. Single roll-up frames (155 mm - 305 mm) and double roll-up frames (305 mm - 610 mm) are made of hot-dipped galvanized 0.8 mm steel. Colours available for these frames are Gloss White, White or Galvalume. All bases, channels and angles, and fasteners necessary to secure the frames to the exterior walls, floors and/or ceilings are included with the frames.

### CORRUGATED SWING DOOR

Our swing door has revolutionized the industry. With reinforced solid-square tube cross braces and 80 mm wide vertical stiles, this door is far superior to any others available in the industry. Our latch with magnetic slide is designed for an optional cylinder and is factory installed on the swing. Available in any of our 0.4mm standard colours (special request colours available). The swing offers an attractive alternative to traditional roll-up doors.

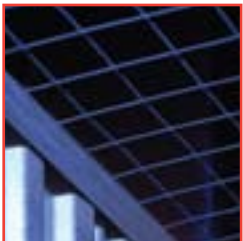

### SECURE WALL

The non-load bearing wall divider is manufactured in 510 mm wide sections that lock together without the use of exposed screws. They are installed vertically to minimize dust. All channels and angles necessary to install secure wall are included. Colours available are Gloss White and White.

This hemmed 0.8mm channel further enhances the strength and integrity of our hallway systems. Offering additional support without having to utilize load-bearing walls, this bracing is available in Gloss White, White or Galvalume.

### MIDSPAN

### MESH

A cost-effective method of keeping your tenants' possessions safe is mesh and mesh angle stretched over the storage units. The 50 mm x 50 mm - 1.5 mm thick mesh provides security between units while still allowing for adequate lighting and air flow inside each unit.

An economical alternative to a flush header is the corrugated filler panel. This 0.4mm component is used in the same manner as the flush header - to enclose the space between the door and top of the hallway. However, unlike the flush header panel, the filler panel can be manufactured in any of the door colours to accent the hallway or roll-up doors. All channel and angle necessary to install the filler panel are included. Top angle is considered an accessory.

### CORRUGATED FILLER PANEL

### LOCKERS

Lockers offer a profitable use for over-the-unit space, or as stackable unit alternatives for minimal storage needs. Our lockers are custom-built to utilize every possible square meter of storage space, and are durable enough to withstand most floor loads. Corrugated and flush doors available. Call for colour selections.

## Door and Partition Systems

*A team of experienced door experts are ready and available to assist you.*

### CHEQUERED PLATE PROTECTORS

Chequered plate protectors are installed to shield the bottom of your hallway walls from scratches and dents that may occur during the moving process. These 0.8mm Galvalume pieces are furnished hemmed on both the top and the bottom. Even though this is typically manufactured 305 mm tall in 3 meter widths, custom sizes can be accommodated. The value of the chequered plates is tremendous considering the wear and tear they take in order to keep your storage facility attractive and looking new.

### CORNER GUARDS

Corner guards can be installed to help protect your hallway corners from scratches, dents and dings that often occur as tenants transport their items through the hallways. As a standard component of the hallway system, the 80 mm x 80 mm – 0.8mm thick corner guards are hemmed on both sides and are available in Galvalume, White or Gloss White. The optional mitered corner guard that further enhances the aesthetics of the hallway system is available for corners where an extended turning radius is desired.

### CORAWALL HALL PARTITION

An alternative to corrugated securewall, these 305 mm self-aligning panels interlock so that there are no exposed screws or edges except where attached at the top channel. The included top and bottom channel provides additional strength for supporting panels. As added insurance, the protective package is available to keep these walls dent and ding free once installed.

### SOFFIT

Soffits offer a bright and safe atmosphere for the owner and tenants, as well as provide a professional, finished look to the ceiling. Features include:

- 80 mm wide soffit allows for complete circulation throughout the entire facility
- Conceals fixtures, such as HVAC ducts, electrical, plumbing and sprinkler systems.
- Supports standard hallway lighting for additional reflection and illumination
- Full soffit available for areas where fixtures are concealed.
- Options for surface mounted lights or 305 mm – 1220 mm drop in light kits.

### UNIT PARTITION

Like the hallway securewall, our unit partition is manufactured in 510 mm wide sections and installed vertically. This 0.4mm Galvalume wall is much more economical than sheet rock or wooded studs, and it still provides the necessary level of security you require in a wall. All channels and angles necessary to install the unit partition are included.

### HEADERS

Manufactured out of 0.8 mm material, the header encloses the area between the top of the door and top of the hallway system, creating a smooth contemporary look to the flush hall system. It provides for a clean transition from wall to ceiling when using a light soffit or solid ceiling and maximizes light reflection. All angle and fasteners required for installation are included in the price of the header panel. Colours available are White, Gloss White and Galvalume.
